

No Pneumonia - 12.5% - Low model confidence - likely clear

1. Patient context

Patient ID: 0004cfab-14fd-4e49-80ba-63a80b6bddd6**Study date:** 19010101**Modality:** CR**Age:** 51**Sex:** Female**Symptoms:** Dyspnea, Fever**Additional context:** Onset

2. Model result

Prediction: No Pneumonia**Pneumonia probability:** 12.53%**Inference time:** 121.22 ms**Model:** clinvision-v2 (threshold 0.5)**Request ID:** b977b8be-53c5-425d-96a3-ae94d0c9d0a2

3. Visual evidence (Original vs Grad-CAM)

Original radiograph

Grad-CAM attention overlay

Warm regions influenced the model most. Grad-CAM is explanatory, not a validated lesion localizer.

4. Clinical summary (LLM)

Generated with free LLM (ollama:llama3.2)

1. Summary

The model estimated a pneumonia probability of 12.5% based on the provided clinical context and image analysis.

2. Explanation

A probability of 12.5% indicates that the model is moderately uncertain about the presence of pneumonia. The Grad-CAM overlay highlights regions of the image that are most influential in the model's prediction. However, it's essential to note that this overlay is not a validated lesion localization tool and should not be used as the sole basis for diagnosis. The clinical context provided cannot override the image model's prediction, and a professional review is necessary to interpret the results accurately.

3. Indications and next steps

Consider the following possibilities: clinical correlation, repeat imaging, specialist referral, or laboratory workup to further evaluate the patient's condition.

4. Limitations

The model output is probabilistic and requires professional review. The Grad-CAM overlay is not a validated lesion localization tool, and the clinical context is not allowed to override the image model's prediction.

5. Limitations

- Model output is probabilistic and requires professional review.
- Grad-CAM highlights influential image regions; it is not a validated lesion localization tool.
- Clinical context is not allowed to override the image model prediction.
